

## **Efforts to Expand Domestic and International Heavy Goods Transportation**

**- Integrated land and sea transportation operator Ohnami Corporation joins Group -**

SENKO Group Holdings Co., Ltd. (Head office: Koto-ku, Tokyo; President: Yasuhisa Fukuda; "SENKO GHD") has decided to acquire 66.6% of warehouse and marine transportation business operator Ohnami Corporation (Head office: Nishi-ku, Osaka; President: Shoichi Morimoto; "Ohnami"), a subsidiary of Hitachi Zosen Corporation (Head office: Suminoe-ku, Osaka; President: Sadao Mino; "Hitachi Zosen"), and plans to make it a subsidiary in March 2023. SENKO GHD and Hitachi Zosen concluded a share transfer agreement dated December 5.

Ohnami specializes in loading, storage, transportation, customs clearance and other operations for heavy goods and large freight, and together with its subsidiary Ohnami Rikuun Corporation (Head office: Nishi-ku, Sakai City, Osaka; President: Koichi Hayashi) has long provided services to major machine and plant manufacturers like Hitachi Zosen, and other shipbuilders and steel manufacturers. It is an Osaka-based logistics company with offices in Ibaraki, Shiga, Kyoto, Hiroshima, and Kumamoto, and provides integrated land and sea transportation services.

SENKO Group operates a land and sea transportation network for heavy goods with group companies like Senko A Line Amano Co., Ltd. and UACJ Logistics Corporation that handle heavy cargo transportation, and marine transportation companies like SENKO Line Co., Ltd., which owns 77 vessels including controlled ships, and Nippon Marine Co., Ltd..

Making Ohnami a subsidiary will help achieve more efficient transportation utilizing SENKO Group's network for return shipping and combined deliveries. Applying Ohnami's know-how on heavy cargo transportation and export packaging laterally throughout the Group will also help it expand its global heavy cargo transportation business.

Ohnami also operates an industrial tools business, and this will be paired with SENKO Group's industrial tool business with the aim of expanding its transportation and installation services for large structural objects and precision machinery.
