

Senko Begins Operation of Three-temperature Zone Logistics Center in Myanmar

- Providing Japanese-style low-temperature logistics services -

Senko Co., Ltd. has established its first presence in the Republic of the Union of Myanmar, by starting operations of a three-temperature zone (cold, freezer, normal temperature) logistics center on October 4, 2016.

Senko established SMI-SENKO PTE., Ltd. (Headquarters: Singapore) in March 2016 in a joint venture with Singapore Myanmar Investco (Headquarters: Singapore), a company that provides logistics services in Myanmar. The 100% subsidiary SENKO SMI Myanmar Co., Ltd. was established in April 2016 to operate the new center.

Established within Yangon City, the new center is located around 4 km from Yangon International Airport, making it an ideal site for storing goods imported by air. The normal temperature warehouse will be used for storage and delivery of goods such as mechanical parts and resin raw materials, the freezer warehouse for foodstuff and other goods (storage temperature: -25°C), and the cold warehouse for processed meats, vegetables and medical supplies (storage temperature:

3 to 5°C) as well as wine, chocolate and other high-value goods (storage temperature: 10 to 15°C).

Equipment and delivery vehicles used at the center will feature the latest freezer and cold logistics technology and know-how in operation by Senko Group company Runtec Co., Ltd. Providing a Japanese-style service will also contribute to the safety of foodstuff throughout Myanmar.

The demand for logistics services in Myanmar will be further assessed as part of plans to expand business in Myanmar, including establishing larger three-temperature zone logistics centers and other facilities.
