

Enhancements to Logistics Functions in the Shizuoka Region

Construction of Higashi-Fuji PD Center

Senko Co., Ltd. (President: Yasuhisa Fukuda) has completed construction the "Higashi-Fuji PD Center" in Fuji City on April 13, to boost logistics capabilities throughout Shizuoka Prefecture.

The new center is located around 10 km from central Fuji City (approximately 15 minutes by car), and is also close to the Tomei Expressway (Fuji Interchange) and the Numazu Bypass (Fuji-higashi interchange). This makes it ideal for covering logistics throughout Shizuoka Prefecture as well as the Kanto and Chubu regions.

The new center is a four-story logistics center with a total floor area of 16,000 m². The front of the warehouse has a 95 m long truck berth providing access for up to 27 trucks, and features such as large 13 m wide eaves make the logistics center capable of operations in all weather conditions. In addition to storage, the building also caters to wholesale and retail logistics, with air-conditioning installed in certain areas to provide a comfortable workplace environment for employees working there.

Stringent security measures are also in place such as IC access control systems and surveillance cameras, and solar panels installed on the roof make it a logistics center that is designed to be environmentally friendly.

<Higashi-Fuji PD Center overview>

1. Address: 154-1 Ono-shinden, Fuji-shi, Shizuoka, Japan
2. Building structure: Steel-framed, high-floor, 4F story building
3. Site area: 10,449 m²
4. Total floor area: 16,369 m²
5. Warehouse area: 15,301 m²
6. Facilities:
 - Cargo elevator x3
 - Vertical conveyor x1
 - Climbing leveler x1

End.
